**Fountain Valley, CA.** CASI Software, innovators in the development of IBM z/OS information transformation and delivery technologies, today announced the release of JES<sup>2</sup>Mail /JES<sup>2</sup>FTP version 4.8.1.

JES<sup>2</sup>Mail and JES<sup>2</sup>FTP transform JES and sequential file report content into PDF, XML, HTML and other formats; enhance the output with advanced PDF Overlays (forms), encryption and password-protection; and then deliver the results to email in-boxes and network servers. Release 4.8.1 is both a roll-up of all software maintenance since v4.8.0 and offers a number of product enhancements, including the license-free addition of RSS web feed support for all JES<sup>2</sup>FTP customers.

Besides adding RSS support, JES<sup>2</sup>Mail /JES<sup>2</sup>FTP 4.8.1 also includes: new functions in the RPL/Script language to enhance text manipulation, such as justify left, right and center; additional controls for handling failure mode situations; expanded GZIP compression processing; and enhanced Trace/Logging support.

The non-report 'SimpleFTP' functions have been expanded to support GZIP for compressing and shipping very large data files. While SimpleFTP creates and delivers ZIP archives, this approach has its limitations with multi-gigabyte files. With the expanded GZIP processing, files are continuously compressed and shipped with minimal memory requirements or need to create an interim ZIP archive.

The Trace/Logging functionality has been enhanced with a 'WrapTrace' capability to store and display trace entries that are currently not shown. One can now run with minimal trace/logging, but still get full trace results should an error occur. For long running jobs, this can capture enough information to resolve problems without having to recreate the condition with a FULL trace. In addition, a new Ruleset statement can set the trace level for a specific Rule, again without having to run the entire operation with FULL trace.

Release 4.8.1 is available to all current maintenance customers and can be downloaded directly from [www.casisoft.com](http://www.casisoft.com). For prospective customers, CASI continues to offer free, no obligation 45-day trials and support for proof-of-concept applications during the trial period.

More information on JES<sup>2</sup>Mail/JES<sup>2</sup>FTP can be found at [www.jes2mail.com](http://www.jes2mail.com) or by contacting CASI by email at [info@casisoft.com](mailto:info@casisoft.com) or by telephone at 714-378-1109.

### About CASI Software

*CASI is a provider of System z information delivery solutions. From the creation of EMS, one of the first mainframe-based email and forms management products, to its JES<sup>2</sup>Mail/JES<sup>2</sup>FTP suite for modernizing, securing and delivering mainframe report content, CASI has over 20 years' experience providing z/OS innovations that provide both hard dollar cost savings and productivity improvements. CASI is located in Fountain Valley, CA. More information on CASI and all its products can be found at [www.casisoft.com](http://www.casisoft.com).*
