Fountain Valley, CA.   CASI Software, innovators in the development of IBM z/OS information transformation and delivery technologies, today announced the release of JES^{2}Mail /JES^{2}FTP version 5.0.

JES^{2}Mail and JES^{2}FTP transform JES and sequential file report content into PDF, XML, HTML and other formats; enhance the output with advanced PDF Overlays (forms), encryption and password-protection; and automatically deliver the results via email, to network servers, or using RSS web feeds. Release 5.0 is both a roll-up of all software maintenance since v4.8.1 and offers several significant product enhancements.

Major enhancements in JES^{2}Mail /JES^{2}FTP 5.0 include: dynamic, intelligent barcoding functions in the RPL/Script facility; native System z AES encryption to reduce CPU cycles; and expanded HFS/zFS file processing.

The new dynamic, intelligent BarCode Facility natively generates barcodes using PDF instruction sets and supports advanced barcoding schemas that require error correction and 2D presentation. This new capability now supports Code39, Code128, PDF417, USPS and QR style barcodes.

The enhanced AES encryption support uses new configuration statements to instruct JES^{2}Mail/JES^{2}FTP to utilize the native System z compression before encryption to significantly reduce CPU cycles.

Enhanced HFS/zFS file processing (HFSWatch facility) further expands the reach and scope of mainframe files and output queues that JES^{2}Mail/JES^{2}FTP can automatically process, transform, enhance and deliver.

JES^{2}Mail/JES^{2}FTP 5.0 is generally available March 31 to all current maintenance customers and can be downloaded directly from the CASI Software web site (www.casisoft.com). CASI continues to offer free, no obligation trials of the full JES^{2}Mail/JES^{2}FTP product suite and provides proof-of-concept technical support during the trial period.

About CASI Software

CASI is a provider of System z information delivery solutions. From the creation of EMS, one of the first mainframe-based email and forms management products, to its JES^{2}Mail/JES^{2}FTP suite for modernizing, securing and delivering mainframe report content, CASI has over 20 years' experience providing z/OS innovations that provide both hard dollar cost savings and productivity improvements. CASI is located in Fountain Valley, CA. More information on CASI and all its products can be found at www.casisoft.com.
