Fountain Valley, CA. CASI Software, the developers of JES²Mail / JES²FTP for batch report transformation and delivery and CICS²PDF™ for native PDF creation from any CICS application, has today announced the release of CICS²PDF™ 1.1.

CICS²PDF is native CICS software to dynamically create secure PDF documents for any CICS application. CICS²PDF creates permanent, portable, secure Adobe Acrobat™ compliant files with advanced features such as encryption, compression, overlays (forms), watermarks, images, annotations, bookmarks and more. CICS²PDF 1.1 adds the following key features: AES-128 encryption for PDF output, embedded PDF file attachments, and simplified MAP scripting for PDF Overlay rendering.

“We take advantage of newer Adobe Acrobat™ capabilities to add AES encryption and the embedding of other files within the PDF. As a result, CICS²PDF now provides stronger encryption for the final PDF document and any attachments or other information delivered to users via the browser, by email or even stored for future use,” states Bob LaBayne, Vice President of Product Development of CASI Software.

“Graphically adding content positioning to the PDF Overlay further simplifies the creation of enhanced PDF output,” adds Randy Benderman, Vice President of Customer Support at CASI.

Early adopters have identified a number of CICS application uses for CICS²PDF, including on-demand billing and account statements, reservation confirmations, encrypted reprints of 1099 and W2 forms, credit and loan processing documents and more.

CASI is offering free 30-day trials and special pricing through September 30. More information on CICS²PDF can be found at www.casisoft.com/c2phome.html or by contacting CASI by email at info@casisoft.com or by telephone at 714-378-1109.
