Fountain Valley, CA.   CASI Software, the developers of the JES^{2}Mail /JES^{2}FTP suite for transforming, securing and delivering mainframe report content, today announced release of CICS^{2}PDF™ – native CICS creation of PDF documents for today's on-demand business and compliance requirements.

CICS^{2}PDF is native CICS software to dynamically create secure PDF documents for any CICS application. CICS^{2}PDF provides advanced PDF overlays and scripting capabilities to create permanent, portable, secure output using Adobe's PDF format from within CICS. CICS^{2}PDF creates Adobe Acrobat™ compliant files with advanced features such as encryption, compression, overlays (forms), watermarks, images, annotations, bookmarks and more.

Early adopter organizations have already identified the following CICS application uses for CICS^{2}PDF: on-demand billing and account statements, reservation confirmations, encrypted reprints of 1099 and W2 forms, credit and loan processing documents and more.

"CICS^{2}PDF not only generates output that prints the same everywhere, that can be password-protected, and automatically incorporates all its presentation characteristics – it can be saved, forwarded, and stored intact for compliance and other business needs. PDF has an enduring quality when compared to the transient nature of HTML" states Bob LaBayne, CASI President and CTO.

"CICS^{2}PDF eliminates the need for moving data back and forth between applications and platforms – no more 'Rube Goldberg' processes that require significant maintenance efforts. CICS^{2}PDF gives you fewer points of potential failure, fewer moving parts, and more control" adds Randy Benderman, Manager, Customer Support at CASI Software.

CASI is offering free 30-day trials and introductory pricing for CICS^{2}PDF through June 30. More information on CICS^{2}PDF can be found at www.casisoft.com/c2phome.html or by contacting CASI by email at info@casisoft.com or by telephone at 714-378-1109.
