Fountain Valley, CA. CASI Software, innovators in the development of mainframe information transformation and delivery technologies, today announced the release of JES²Mail /JES²FTP version 4.6 and introduced JES²RSS, bringing RSS web publishing technology to the mainframe.

JES²Mail and JES²FTP transform JES and sequential file report content into PDF, XML, HTML and other formats; enhance the output with advanced PDF overlays (forms), encryption and password-protection; and deliver the results to email in-boxes and network servers. Release 4.6 incorporates all software maintenance since version 4.5 and enables JES2FTP to support the new RSS web feed publishing option. RSS support can be added to existing JES2FTP installation as an optionally licensed module.

JES²RSS, a combination of JES²FTP with RSS support, gives customers the ability to publish mainframe reports and content as RSS web feed documents. After JES²FTP has generated a new report and transferred it to an FTP server, it then automatically adds a link to that document into an RSS web feed file. Users with RSS clients such as Internet Explorer, Firefox, MS Outlook 2007, or one of the many other RSS 2.0 compliant readers, can subscribe to these web feeds and be automatically informed of new additions to the feed.

“CASI Software is providing technology to allow mainframe applications to fully participate in Web 2.0 implementations. We are very excited to be able to introduce this leading edge technology to the mainframe market” says Randy Benderman, Customer Support Manager at CASI Software.

Release 4.6 is available to all current JES²Mail /JES²FTP maintenance customers and can be downloaded directly from www.casisoft.com. For prospective customers, CASI continues to offer free, no obligation 45-day trials and direct support with proof-of-concept applications during the trial period.

More information on JES²Mail/JES²FTP/JES²RSS can be found at www.jes2mail.com or by contacting CASI by email at info@casisoft.com or by telephone at 714-378-1109.

About CASI Software

CASI is a leading provider of zSeries information delivery solutions. From the creation of EMS, one of the first mainframe-based email and forms management products, to its JES²Mail/JES²FTP suite for modernizing and delivering mainframe report content, CASI has over 20 years' experience providing zSeries innovations that provide both hard dollar cost savings and significant productivity improvements. CASI is located in Fountain Valley, CA. More information on CASI and all its products can be found at www.casisoft.com.
