Fountain Valley, CA. CASI Software, innovators in the development of mainframe information transformation and delivery technologies, today announced the release of JES²Mail /JES²FTP version 4.7.

JES²Mail and JES²FTP transform JES and sequential file report content into PDF, XML, HTML and other formats; enhancing the output with advanced PDF Overlays (forms), encryption and password-protection; and deliver the results to email in-boxes and network servers. Release 4.7 is both a roll-up release containing all fixes issued since version 4.6 and additionally offers the new report collation support, script language enhancements, a new 'simple FTP' operation, and for enhanced reliability a Queued Mail delivery option.

JES2Mail/FTP has always support splitting reports into sub-reports and distributing them to disparate destinations, but always with a single 'JOB'. With report collating, reports from various jobs can be split and stored in 'containers' until a subsequent event triggers the packaging and shipping of the bundles.

With Queued Mail, email is stored in temporary 'ready to ship' files on the host, until the transmission operation can securely and reliably forward them to a mail server. While customers regularly complement JES2Mail for reliability, this option can boost the reliability to a near 100% level.

The Simple FTP operation allows for transmission via FTP of non-report data files. The operation provides more functionality than 'regular FTP', such as ZIP compression and converting a file to CSV, but less than the more comprehensive Report transformation of JES2FTP's report mode.

Release 4.7 is available to all current maintenance customers and can be downloaded directly from www.casisoft.com. For prospective customers, CASI continues to offer free, no obligation 45-day trials and direct support with proof-of-concept applications during the trial period.

More information on JES²Mail/JES²FTP can be found at www.jes2mail.com or by contacting CASI by email at info@casisoft.com or by telephone at 714-378-1109.

About CASI Software

CASI is a provider of zSeries information delivery solutions. From the creation of EMS, one of the first mainframe-based email and forms management products, to its JES²Mail/JES²FTP suite for modernizing, securing and delivering mainframe report content, CASI has over 20 years' experience providing zSeries innovations that provide both hard dollar cost savings and productivity improvements. CASI is located in Fountain Valley, CA. More information on CASI and all its products can be found at www.casisoft.com.
